AI-Generated Summary

In the provided dataset, two visits were recorded on 2025-05-28 at Grand Tunis, Ben Arous, Radès and an unspecified location. All visits were classified as 'visited' with no pending, validated, or rejected visits. The average duration of these visits was approximately 130 seconds (0.13 hours). Notably, both visits related to a customer complaint and the checklist was completed for each visit. As all visits occurred on the same day, there are currently no discernible trends or patterns in the data. However, it is concerning that both visits were handled by different agents without an identified supervisor present during the visits. Recommendations include ensuring proper supervision during customer visits to maintain service quality and address any escalating issues effectively. Additionally, investigating why no agent was recorded for one of the visits may help improve reporting accuracy.
